

*** (Not More than 6 pages)

Title: Begin with strong, specific keywords (Framework/Model name) + include special technique/technology used + application area. (Optional)

Abstract: (No reference in abstract)

=====

- 1) Problem Definition and importance.(may be two sentence)
- 2) Limitations of existing works to solve the problem.(in 1 sentence)
- 3) The key concept and proposal of this work.(in 1 sentence)
- 4) Important features of the key contribution. (in 1 sentence)
- 5) Additional contribution (in 1 sentence)
- 6) Performance Evaluation (additional benefits) (in 1 sentence)

No reference will be used in the abstract.

***1-6 Serial must be maintained in abstract.

Introduction of a Conference Paper

1. Introduction (at least 3-4 paper reference)

=====

1st Paragraph:

Importance of the problem domain.

Applications of the (example of practical application) mentioning increasing emerging demand.

Problem dimension....related practical topics (Parameters, fields, (identify related fields))

2nd Paragraph:

Problem Definition and why it is a complex scientific problem/ engineering problem)

How this type of problems were solved in literature? This is the summary of related work that will be described later.

Limitations, that will pull the 3-4 motivation of the papers.

3rd Paragraph:

Your contribution in an extended way, no description of how it will work but model name, environment name, parameter name, an abstract view, and paragraph will end with if possible a list of contributions like Contributions of this work is summarized as below..... and mention the additional contribution of this paper. How much performance has been improved.

Start with, In this paper we have developed

4th Paragraph:

This paper is organised as follows

Section II: related works.

Section III: System Environment and Assumptions

Section IV: Proposed Privacy-Preserving Federated Learning

Section V: Performance Evaluation

Section VI: Conclusion

Related Works of a Conference Paper

2. Related Works

=====

Broadly how much work has been done on this work domain mention in three division on First, Second and Third paragraph.

First Paragraph, How this particular work is being improved over the course of time (Old work divide from 2010-2015), give full chronological overview in a more concise, IEEE-style version of this literature review with tighter language and slightly reduced citations so it's optimized for conference page limits.

Second paragraph, Then give the full chronological overview of the related works from 2015-2020 in a more concise, IEEE-style version of this literature review with tighter language and slightly reduced citations so it's optimized for conference page limits.

Third paragraph, give the literature overview of the very close works to this work (work from 2020-2025)

And describe how your work is academically different than those works.

Last paragraph: Explicitly how this work is novel compared to others, this must be mentioned.

System Environment and Assumptions for a Conference Paper

3. System Environment and Assumptions

=====

Work environment, Assumptions, symbolic representation, all agents interactions, Fill up all the hole/gaps in this work.

Proposed Model/Framework for a Conference Paper

4. Proposed Privacy-Preserving Federated Learning Framework

=====

4/5 section following the Bottom up approach (first fundamental required details then describe the overall system design)

- 4.1 Paragraph
- 4.2 Paragraph
- 4.3 Paragraph
- 4.4 Paragraph

5. Performance Evaluation

=====

- 5.1 Simulation environment setup
- 5.2 Metrics
- 5.3 Results comparisons (Graph and graph comparisons)

6. Conclusion

=====

Do not echo the abstract.

- 6.1 What you have found
- 6.2 What are your propositions
- 6.3 What improvement specifically you have made
- 6.4 Percentage of improvement in terms of other works.
- 6.5 One/two future work direction.

References:(Not more than 15 for conference paper to strict with the 6 page limitations).
